NIHAL HASAIN C

CYBERSECURITY | SOC ANALYSIS | VULNERABILITY ASSESSMENT

Bengaluru, India | +91 9048652406 | nihalcheer@gmail.com

Portfolio: https://nihalhasain.online | LinkedIn: https://in.linkedin.com/in/nihalhasain-c

PROFESSIONAL SUMMARY

Entry-level cybersecurity professional and BCA graduate with practical exposure to SOC alert triage, security-log analysis, network reconnaissance, and web application security testing in authorized lab environments. Familiar with Splunk, Wireshark, Nmap, Burp Suite, Linux, and Windows security tools. Experienced in documenting findings, reviewing evidence, and identifying remediation considerations through internship work, hands-on labs, and security projects. Seeking a junior SOC Analyst, Security Analyst, or VAPT Intern/Associate opportunity.

EDUCATION

Bachelor of Computer Applications (BCA) | Bengaluru North University | 2023 – 2026

Higher Secondary Education – Computer Science | GMHS Perinthalmanna | 2021 – 2023

CERTIFICATIONS

- Google Cybersecurity Professional Certificate
- IBM Cybersecurity Analyst Professional Certificate
- Tata Cybersecurity Analyst Job Simulation – Forage
- Mastercard Cybersecurity Job Simulation – Forage

TECHNICAL SKILLS

SOC & Blue Team: Alert triage, log analysis, incident investigation fundamentals, phishing analysis, event correlation, basic threat detection

Network Security: TCP/IP, ports and protocols, DNS, HTTP/HTTPS, network scanning, traffic analysis, firewall concepts

Web & VAPT: OWASP Top 10 fundamentals, reconnaissance, service and directory enumeration, authentication/access-control testing, security misconfiguration

Tools: Splunk, Wireshark, Nmap, Burp Suite, Gobuster, Metasploit, Hydra, Nikto, SearchSploit, smbclient, enum4linux, cURL

Platforms & Scripting: Linux, Kali Linux, Windows, Python, Flask, SQL, Git/GitHub

PROFESSIONAL EXPERIENCE

Cyber Security Intern | Biztras IT Solutions | Aug 2026 – Present

- Conduct reconnaissance and service enumeration using Nmap in authorized testing environments.
- Practice web application testing with Burp Suite, cURL, and manual endpoint analysis; assess authentication, session management, access control, and input-validation issues.
- Perform directory and endpoint discovery with Gobuster and SMB enumeration with approved lab tools.
- Research known vulnerabilities using SearchSploit and public vulnerability references; document evidence, potential impact, and remediation considerations.

Cyber Security Intern | Elevate Labs | Nov 2025 – Dec 2025

- Analyzed DNS, TCP, TLS, and HTTP traffic using Wireshark and performed basic network scanning with Nmap.
- Reviewed phishing-email indicators and email headers; used MXToolbox for supporting checks.
- Practiced Windows Defender Firewall hardening and used Splunk for introductory log analysis and security-event review.

- Performed VPN/DNS leak checks and reviewed browser extensions for potential security risks.

SELECTED PROJECTS & HANDS-ON LABS

Hybrid Phishing Detection System | Python, Flask, Machine Learning

- Developed a multi-layer URL analysis application combining a machine-learning model, rule-based checks, domain inspection, and threat-intelligence lookup.
- Designed the project to present consolidated URL risk results and support URL history and administrative model-management workflows.

SOC Alert Investigation | Splunk, Sysmon, Firewall Logs

- Investigated simulated phishing and suspicious-connection alerts by correlating email, firewall, and endpoint telemetry.
- Reviewed process-creation events and command-line activity, then classified alerts using available evidence as true or false positives.

VAPT & Web Security Labs | TryHackMe, OWASP-based practice

- Practiced reconnaissance, service enumeration, directory discovery, SMB exposure checks, and vulnerability research in controlled environments.
- Recorded test steps, supporting evidence, likely impact, and remediation notes.
